No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1988 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

EXPERIMENTAL NEUROLOGY

A Journal of Neuroscience Research

Information for Authors

Experimental Neurology publishes the results and conclusions of original research in neuroscience with a particular emphasis on novel findings in neural development, regeneration, plasticity, and transplantation. Emphasis is also placed on basic mechanisms underlying or related to neurological disorders. Although the journal does not consider case reports for publication, information that bridges basic and clinical questions is of a high priority. Brief communications of important new data and scholarly reviews of important questions will be considered for publication. Manuscripts in other areas of neuroscience will be considered if they show relevance to the primary mission of the journal. Policy regarding publication of experiments on unanesthetized animals conforms with the standards for use of laboratory animals established by the Institute of Laboratory Animal Resources, U.S. National Academy of Sciences. Exposition must be as brief as is consistent with accuracy and clarity. Lengthy bibliographic lists should be avoided.

Manuscript Submission. Submit manuscripts in quadruplicate (original and three copies) to:

John R. Sladek, Jr., Ph.D.
Editor-in-Chief, *Experimental Neurology*
Department of Neurobiology & Anatomy
University of Rochester Medical Center
601 Elmwood Avenue, Box EXPN
Rochester, New York 14642
Telephone: (716) 275-1963

Manuscripts are accepted for editorial review with the understanding that the content has not been published previously except as a preliminary report and is not submitted elsewhere for publication. **Furthermore, it is understood that they will have received the appropriate clearance and the approval of all authors necessary for publication prior to submission.**

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Consideration for Publication. Each manuscript received by the editorial office is screened initially by a member of the Editorial Board in order to judge its relevancy to the interests of the journal. Those contributions judged to be of sufficient interest then are assigned to one or more reviewers who are asked to provide both a critique and priority rating.

Cover Photographs. Authors are encouraged to submit potential cover photographs for consideration directly to the Editor at the time of submission of a manuscript.

Preparation of Manuscript. Prepare typewritten or word-processed manuscripts double-spaced throughout, including acknowledgments, abstract, and references, on 21.6 × 28-cm sheets, and in *Experimental Neurology* format. Most recommendations of the Council of Biology Editors are to be followed; consult the *CBE Style Manual*, 5th ed. (Council of Biology Editors, 9650 Rockville Pike, Bethesda, MD 20814). All authors are encouraged but not restricted to limit the length of manuscripts submitted to about 20 pages (21.6 × 28 cm), double-spaced, including tables and figures (about 6 printed pages).

Brief Communications. Short manuscripts of no more than 6 or 7 double-spaced typed pages and limited to 1 figure and/or table (approximately 2 printed pages) will be considered. They should have an abstract of a few sentences, but no section headings.

Critical Reviews. Authors should first communicate with the Editor-in-Chief describing the topic and intent of potential review articles prior to submission to the journal. Reviews should emphasize emerging fields or should critically analyze existing data and questions. At the discretion of the Editor-in-Chief these reviews may be accompanied by scientific dialogue from other contributors.

Spelling. Follow *Webster's New International Dictionary*, Third Edition, Unabridged (1976) for spelling and division of words. Nonstandard abbreviations should be minimal.

Numerals. Use numerals with standard units of measurement and for any number above nine. The metric system must be used and abbreviations made according to the International System (*Standard Metric Practice Guide*, American Society for Testing Materials, Philadelphia, 1970).

Illustrations. The maximum available page space is approximately 18 × 23 cm. Each component of a composite figure should be lettered consistently on the lower or upper left face and referred to in text and caption. All lettering must be done with professional skill or with "Artype" characters. For best reproduction provide clear, sharp, glossy prints with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. Figure captions should be typed (double-spaced) continuously on a separate page, with each caption beginning on a new line; it is not necessary to use a separate page for each caption. Illustrations in color can be accepted only if the authors defray the cost.

Tables. Organize tables horizontally on the page if possible. Footnotes to tables should be typed immediately below the tables and referred to with superscript, lowercase, italicized letters.

Title Page. A short title of no more than 50 characters (to be used as the running head) should appear on the title page, with the name, address, and *telephone number* of the author with whom editors and publisher may communicate.

Key Words. Key words should be included at the bottom of the title page. Ideally, 6–8 identifiers should be provided to aid the indexing and review process.

Acknowledgment. Incorporate all acknowledgments into a single footnote to authors' names.

Abstract. Summarize the problem, the methods, and the results and their significance in a single paragraph of 250 words or less.

References. Use numerals in parentheses in the text. List references alphabetically and number consecutively, but do not incorporate "personal communications" or "unpublished observations" into this list. Abbreviations of journal titles should conform to *Index Medicus*, a complete list of which appears in its December issue. Note below some examples of punctuation and format for *Experimental Neurology*.

1. BRODAL, A. 1981. *Neurological Anatomy in Relation to Clinical Medicine,* 3rd ed. Oxford Univ. Press, New York.
2. CASPARY D. M., L. P. RYBAK, AND C. L. FAINGOLD. 1985. The effects of inhibitory and excitatory amino-acid neurotransmitters on the response properties of brain stem auditory neurons. Pages 198–226 in D. G. DRESCHER, Ed., *Auditory Biochemistry.* Thomas, Springfield, IL.
3. NOBLE, L. J., AND J. R. WRATHALL. 1988. Blood–spinal cord barrier disruption proximal to a spinal cord transection in the rat: Time course and pathways associated with protein leakage. *Exp. Neurol.* **99:** 567–578.

Proofs. Two sets of proofs and the original manuscript are sent to the author designated to receive them. To avoid delay in publication, only necessary changes should be made, and proofs and manuscript should be returned promptly.

Reprints. Authors may order reprints, using the order form provided with the proofs.
